CATALOGUE

of

IRISES

1926

The Iris Place

1230 West High Street

Versailles Pike

LEXINGTON, KENTUCKY

General Information

TERMS

Cash with order or before shipment. We cannot send plants C. O. D. One fourth the purchase price will hold your order. No order will be held without such a deposit.

ACCEPTANCE

All orders will be booked and shipped in rotation, subject to stock being unsold or available on receipt of order. When we are not able to fill orders or any part thereof, we shall immediately notify and refund your money

DELIVERY

We prefer to ship rhizomes of Iris as soon after the blooming season as possible. We consider June the best month to plant. By planting then, the plants have time to become established before winter sets in. PLANT IN JUNE OR JULY AND TAKE NO CHANCE ON HAVING THE PLANTS HEAVING OUT IN SPRING THROUGH FREEZING AND THAWING. We prepay on all orders for \$1.00 or more, for less than \$1.00 add 15c for postage and insurance. Shipments are usually made within 24 to 36 hours after receipt of order, if weather permits. We ship dry rhizomes. We begin to ship about June 10th.

PRICES

Net cash with order. We have tried to make the price as low as possible consistent with the production of high quality stock. Prices are for single, strong, field grown transplants.

OUR GUARANTEE

We believe that every variety (500) on our place is true to name and in case that you receive plants not as represented, we guarantee to replace two for one, upon the return of stock bought of us. Always lets us know if goods are not satisfactory.

NO SUBSTITUTIONS!

We never substitute except upon request. In case we are out of stock we promptly refund your money,

COLLECTIONS

While we do not believe in made up collections, we have been asked by many to make up at least two, one of the better kinds of cheaper priced iris, and the other, composed of the best kinds. These two collections will be found on back page.

AMERICAN IRIS SOCIETY

Every person having at least 25 good Iris should join the A. I. S. Four bulletins are issued each year and each number is worth its weight in gold.

For an order of \$25.00 cash, we will pay your membership dues to this organization for one year

WE ARE MEMBERS OF:

American Iris Society.

American Rose Society.

American Gladiolus Society.

Botanical Society of America.

DIRECTIONS

As soon as the plants are received, unpack and dry in the air for an hour or two, in the shade. Plant the iris rhizomes not more than two inches deep and do not water. They may be watered a little during June and July but must have no water during August and September. This is the period when they are ripening, preparatory to their entry for winter. If rhizomes are not properly hardened off by the hot sun during the months of August and September they will have a tendency to rot. In planting make sure that the soil is well firmed about the rhizome.

We ship plants with the fibrous roots and parts of the tops cut off ready for transplanting. Do not be alarmed by seeing the small roots cut away, since these always rot off and new ones are formed after each transplanting. We try to do everything humanly possible to bring success to our customers.

Iris will grow and thrive on most any kind of soil, but a good loam is best. Do not fertilize with commercial fertilizers or with stable manures since these, especially the latter will induce rots. Rots by the way are superinduced. They are caused largely by having too much organic manure incorporated with the soil and too much water. Soils must be well drained to have the best success with Iris. We have not been bothered with any insect or plant pest on the place. We keep everything in a sanitary condition and this prevention is what we believe in.

Some people believe Iris should be mulched. This is not so. Iris are perfectly hardy and the coldest winter will not freeze them out. It is too much water that is harmful. Do not mulch your iris unless they are set out late in the fall, and then only by the use of a few corn stalks. Always allow plenty of air to circulate about the plants.

The iris offered in this catalogue are grown and carefully

checked by a botanist and we take pride in the fact that we have the finest stock procurable in America. We have many mover iris varieties on the place, not ready to offer because of limited stock, and if you do not find in this small catalogue what you want, write us and we may be able to supply in small quantities.

We are always ready to answer queries regarding iris and if your inquiry is sent during the summer do not become impatient if you do not receive an answer by return mail. Remember that we are very busy filling orders at this time and we will do our best to answer your letters as soon as possible. Some of the iris in this catalogue are still high priced and are in limited stock, so please order early and avoid disappointment.

DESCRIPTION AND PRICE

83—AFTERGLOW (Sturtevant 1917) Misty lavender lit with
yellow at the center; 3-4 ft\$1.00
79—ALBERT VICTOR (Barr 1885) S. soft blue-lavender, F.
